

Fire Safety Drill

Fire safety is important in any organization and mandatory at educational institutions. On this regard, a fire safety program was conducted on 24th February 2021.

The officers demonstrated on extinguishing fire in case of fire accidents and trained our teachers on the evacuation process. This is a safety measure we would consider to educate our children and train them too on such emergencies. All the teachers were trained on operating fire extinguishers, using the first aid hose reel and the hydraulic jet. A mock drill was also conducted by activating the fire alarm.

The School has nominated a fire warden, along with a 6 member rescue team, who are trained to handle emergencies and to help evacuate the students and the staff.

Once the school reopens, the children will be trained to evacuate and assemble at the designated assembly points.
